1 Introduction and UUC Performance Requirements

1.1 This procedure describes the calibration of the DeFelsko/PosiTector 100 (Multi-Layer) Coating Thickness Gage with a “D” type probe. The gage-probe combination has the following specifications:

<table>
<thead>
<tr>
<th>Gage-Probe</th>
<th>Measurement Range *</th>
</tr>
</thead>
<tbody>
<tr>
<td>100 D (Multi-Layer)</td>
<td>1-8 mm</td>
</tr>
<tr>
<td></td>
<td>48 – 350 mils</td>
</tr>
</tbody>
</table>

* The range of the system depends on the coating material being measured. This range is based on a polymer coating.

1.2 The unit being calibrated will be referred to as the UUC (unit-under-calibration).

1.3 UUC Environmental Range:
- Temperature: 23 ± 5°C.
- Relative Humidity: Up to 95%

1.4 UUC Warm-up and Stabilization Period requirements: Does not apply.

<table>
<thead>
<tr>
<th>(UUC) Function</th>
<th>Performance Specifications</th>
<th>Test Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accuracy Test</td>
<td>1-8 mm, ± (2 µm + 3% of reading)</td>
<td>Compared to Coating Thickness Reference Standards.</td>
</tr>
<tr>
<td>100 D (Multi-Layer)</td>
<td>48 to 350 mils, ± (0.1 mils + 3% of reading)</td>
<td></td>
</tr>
</tbody>
</table>

2 Measurement Standards and Support Equipment Performance Requirements

2.1 Minimum-Use-Specifications are the calculated minimum performance specifications required for the measurement standards and support equipment to be utilized for comparison measurements required in the Calibration Process.

2.2 The Minimum-Use-Specifications are developed through uncertainty analysis and are calculated through assignment of a defined and documented uncertainty ratio or margin between the specified tolerances of the UUC and the capabilities (uncertainty specifications) required of the measurement standards system.

2.3 The uncertainty ratio applied in this Calibration Procedure is 4:1 or better.

Caution: The instructions in this Calibration Procedure relate specifically to the equipment and conditions listed in Section II. If other equipment is substituted, the information and instructions must be interpreted accordingly.
Measurement Standards & Support Equipment

Environmental Requirements:
- Temperature: $23 \pm 5^\circ C$
- Relative Humidity: Less than 95%

Measurement Standards & Support Equipment

Warm-up and Stabilization Requirements: Not Required

<td>Coating Thickness Reference Standards</td>
<td>Range</td>
<td>Accuracy</td>
</tr>
<tr>
<td>60 – 250 mils</td>
<td>± 0.1625 mils</td>
<td></td>
</tr>
<tr>
<td>1.5-6 mm</td>
<td>± 4.0 µm</td>
<td></td>
</tr>
</tbody>
</table>

DeFelsko Corporation, Thickness Calibration Standards, Model CAL-P4

3 Preliminary Operations

Note: Review the entire document before starting the calibration process.

3.1 Visual Inspection - Damage or excess wear should be repaired prior to beginning the calibration process. Visually inspect the UUC for:
- Damaged LCD display
- probe wear
- cracked or broken case
- missing parts
- proper identification

3.2 Gage Reset - Push the Reset Button on the top of the gage using a ball point pen or paper clip. Push the 1st and Last Button on the front of the gage simultaneously until you hear a beep. (see Figure 3-1).

3.3 Probe Zero - Using the Setup Menu, perform the Probe Zero function. Be sure the probe tip is clean prior to zeroing.
4 Calibration Process

*Note:* Whenever the test requirement is not met, verify the results of each test and take corrective action before proceeding.

4.1 Accuracy Test

4.1.1 Using the Mode menu, turn on Graphics.

4.1.2 If the gage is to be calibrated in metric units, use the Admin menu to “Change to Microns”

4.1.3 Adjust the “A Gate” and “B Gate” as necessary to make readings. The gates may be adjusted at any time during the calibration process.

4.1.4 Measure the 185 mil (4600 micron) standard. Be sure to use couplant in making measurements.

4.1.5 Using the Setup menu, select “Adjust Reading.”

4.1.6 Toggle selection to allow adjustment of the Sound Velocity Constant (Veloc).

4.1.7 Use the “+” and “-” buttons to adjust the sound velocity shown on the gage to the value given for each thickness calibration standard.

4.1.8 Use the UUC to make readings of each standard. Verify that the readings are within the allowable limits determined in Table 5-1. Record the reference standard values, the Sound Velocity Constants and the readings on the Certificate of Calibration.

4.1.9 In making readings the probe tip should be centered on area A of the Coating Thickness Reference Standard as shown in Figure 4-1.

5 Performance Requirements

*Note*: The technician should collect the data needed to complete columns B and C of the appropriate table below. Do not write in this procedure.

Table 5-1 Performance Requirements and Calibration Data for DeFelsko/PosiTector 100 D (Multi-Layer)

<table>
<thead>
<tr>
<th>Nominal Thickness</th>
<th>Reference Standard</th>
<th>Gage Measurement</th>
<th>Min. Reading Allowed</th>
<th>Max. Reading Allowed</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>A</td>
<td>B</td>
<td>C</td>
<td>D</td>
</tr>
<tr>
<td>60 mil</td>
<td></td>
<td></td>
<td>0.97 * B - 0.1 mil</td>
<td>1.03 * B + 0.1 mil</td>
</tr>
<tr>
<td>100 mils</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>185 mils</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>250 mils</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

* For metric readings convert using 1 mil = 25.4 microns
